Fluoride (F) in Humans

Version 1.2  11 February 2011  Copyright© 1990 GrazingInfo Ltd

Introduction

Fluoride is very controversial with strong opinions on both sides.

In June 2003 sore pain suddenly occurred in my right knee when walking up stairs. The Internet said it was possibly too much fluoride which is in Hamilton’s drinking water which I drank a lot of, so we changed to spring water and three months later my knee got better, and now in 2011, still is. Many friends have had knees and hips replaced, some more than once. We take two 3 mcg boron tablets daily.

See -

Google for Fluoride+New Zealand+Napier and Fluoride+New Zealand+Hastings

I have a hundred pages on fluoride so the above will suffice for now, because most minds are made up. I’ve been told that the five pages of references below are against fluoride in water. Obviously they need not be read.

1953:... a person drinking fluoridated water may be assumed to ingest only about 1 milligram per day from this source ... the development of mottled enamel is, however, a potential hazard of adding fluorides to food. The total daily intake of fluoride is the critical quantity."
1971: "In the assessment of the safety of a water supply with respect to the fluoride concentration, the total daily fluoride intake by the individual must be considered. Apart from variations in climatic conditions, it is well known that in certain areas, fluoride containing foods form an important part of the diet. The facts should be borne in mind in deciding the concentration of fluoride to be permitted in drinking water."
